# The seven golden rules for being successful in research

---

1. Invest in education

**2. Choose the right co-workers**

# Modeling, Modeling, Modeling

---

## Systems vs Applications

The most performing system doesn't work if the application is wrong!

But doing applications right requires:

- Languages
- Methods
- Tools

# Why Modeling?

# The seven golden rules for being successful in research

---

1. Invest in education
2. Choose the right co-workers
- 3. Take context into account**

...while deciding your research agenda

# Conceptual Data Modeling

RELATIONAL MODEL

SEMANTIC NETWORK

ER MODEL

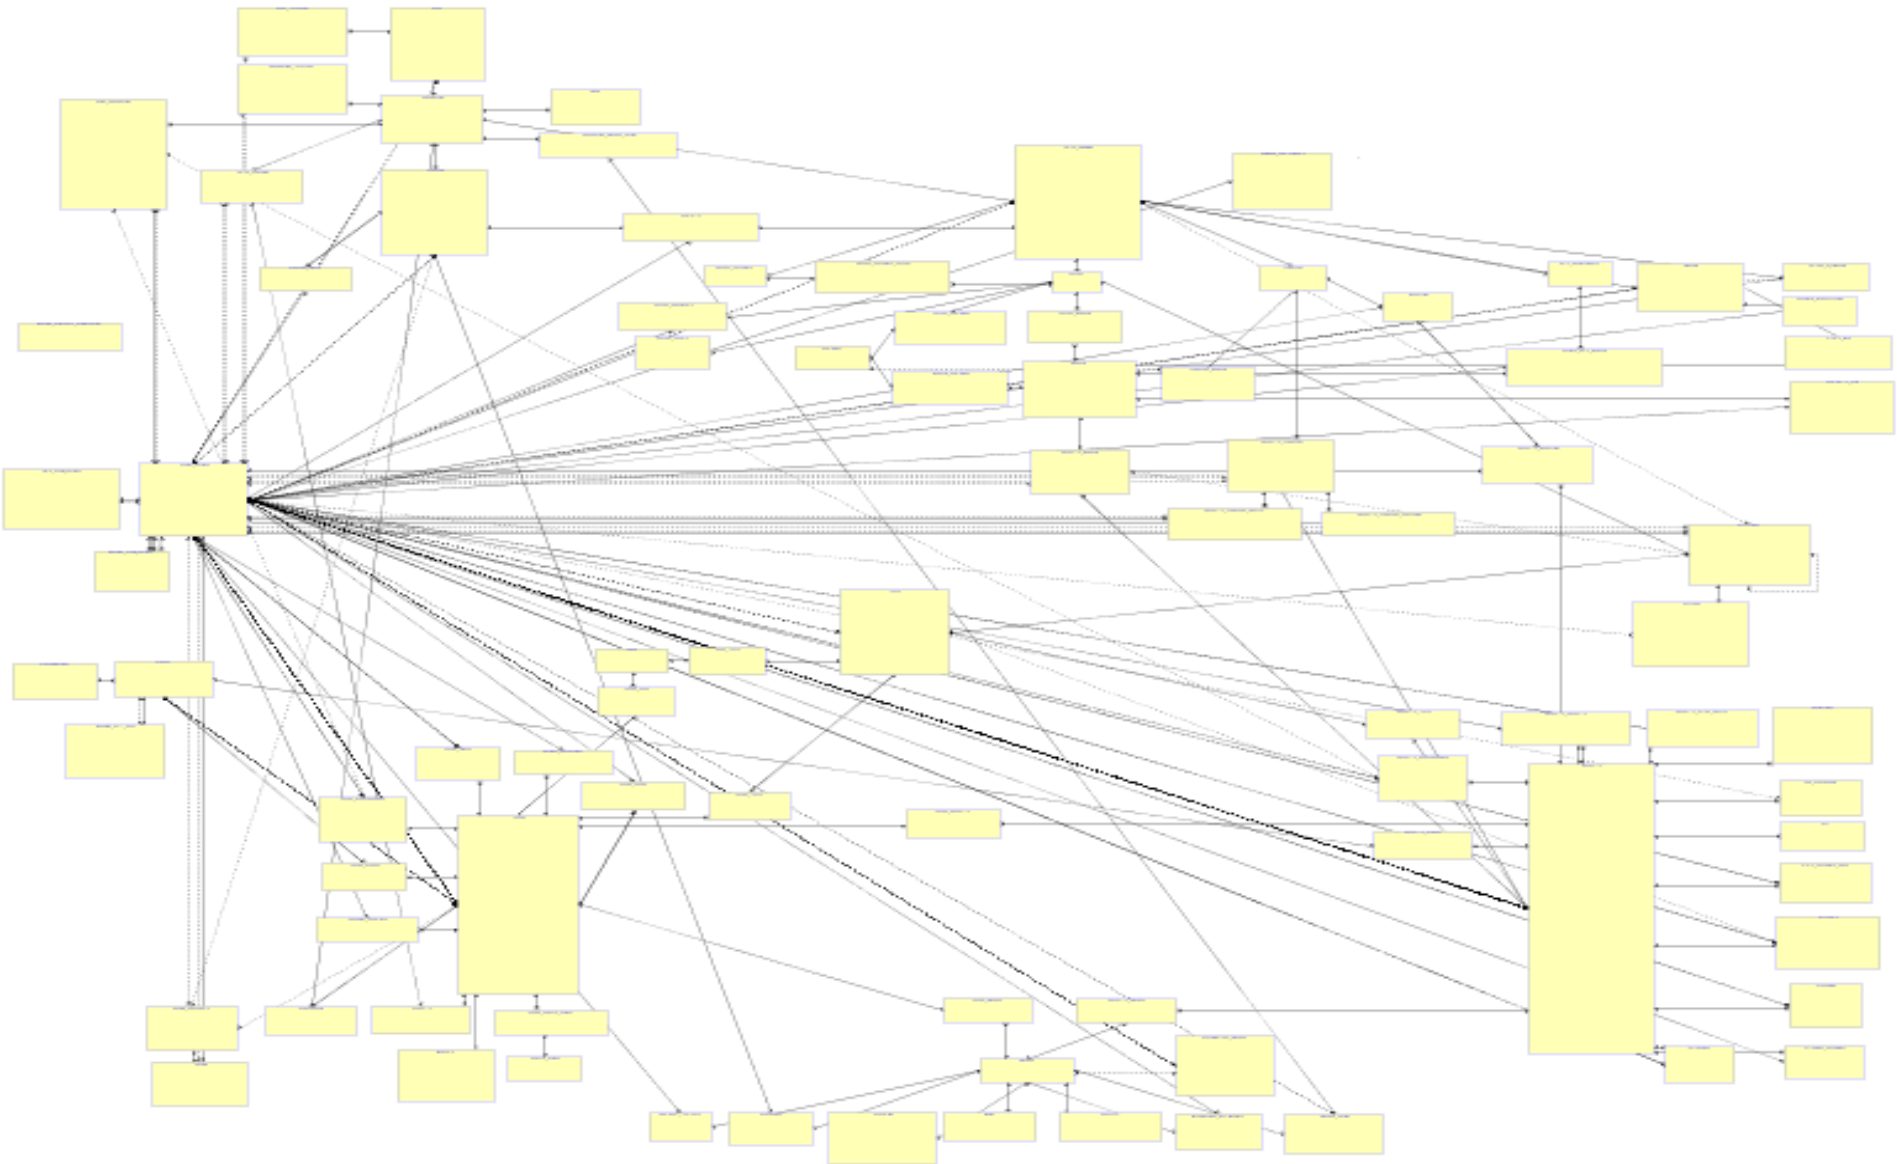

AGGREGATE  
OF ENTITIES

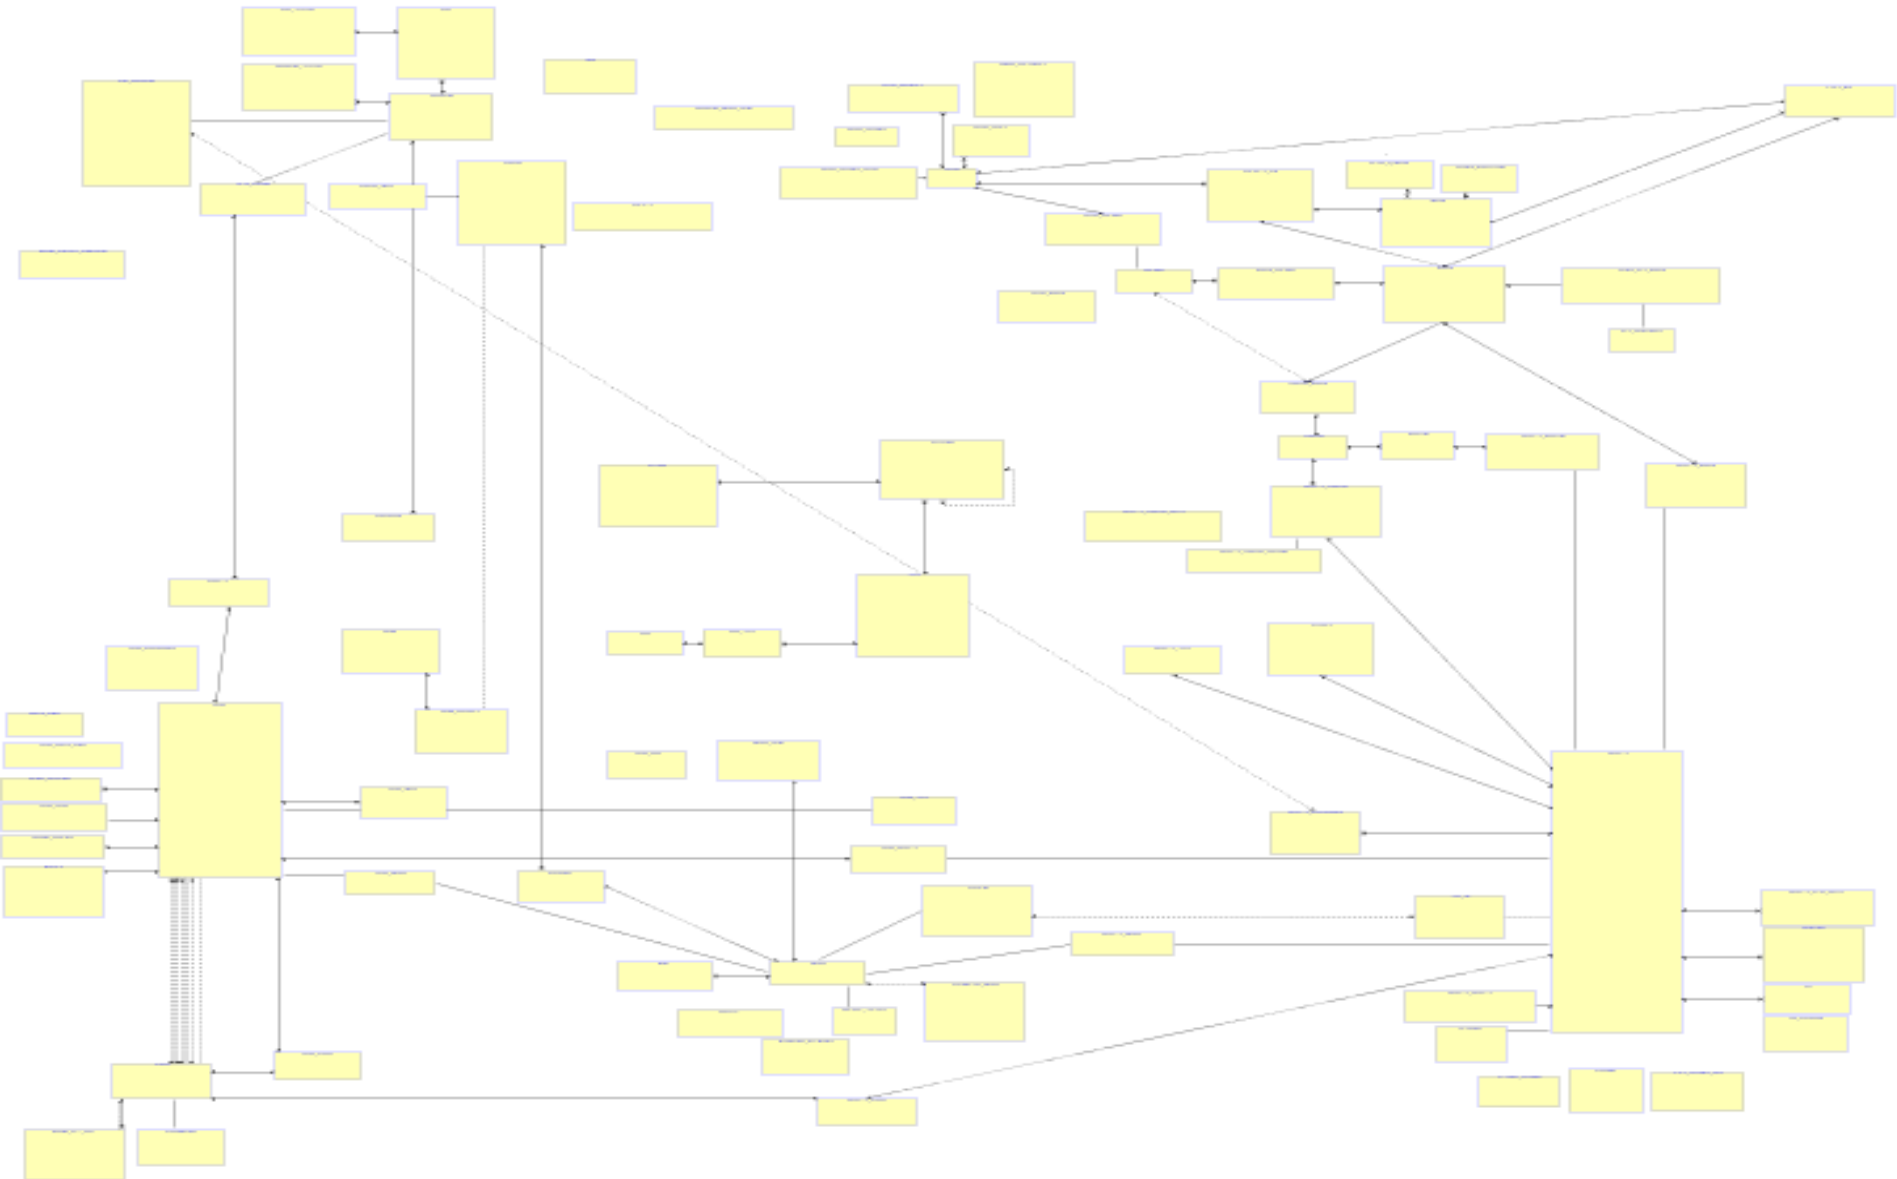

# Initial design

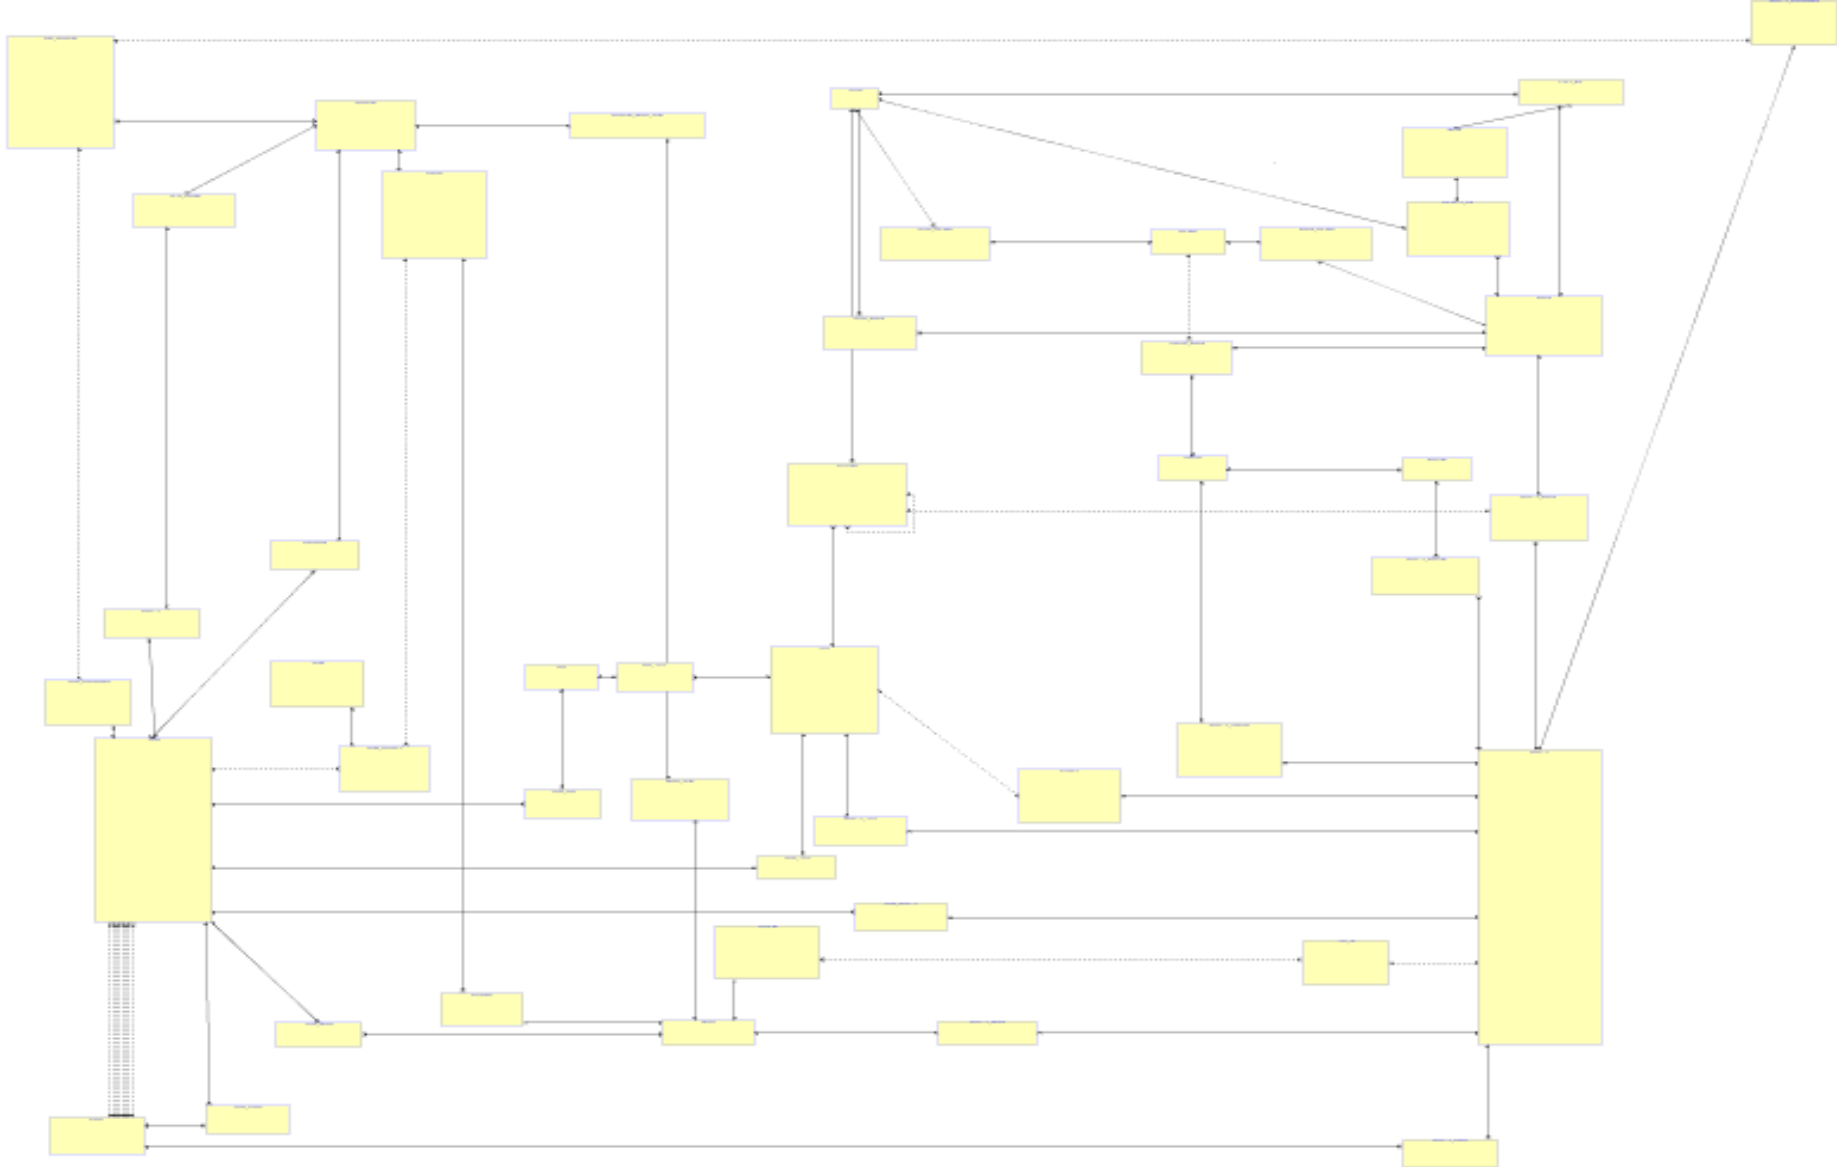

# No domains, graphic readability

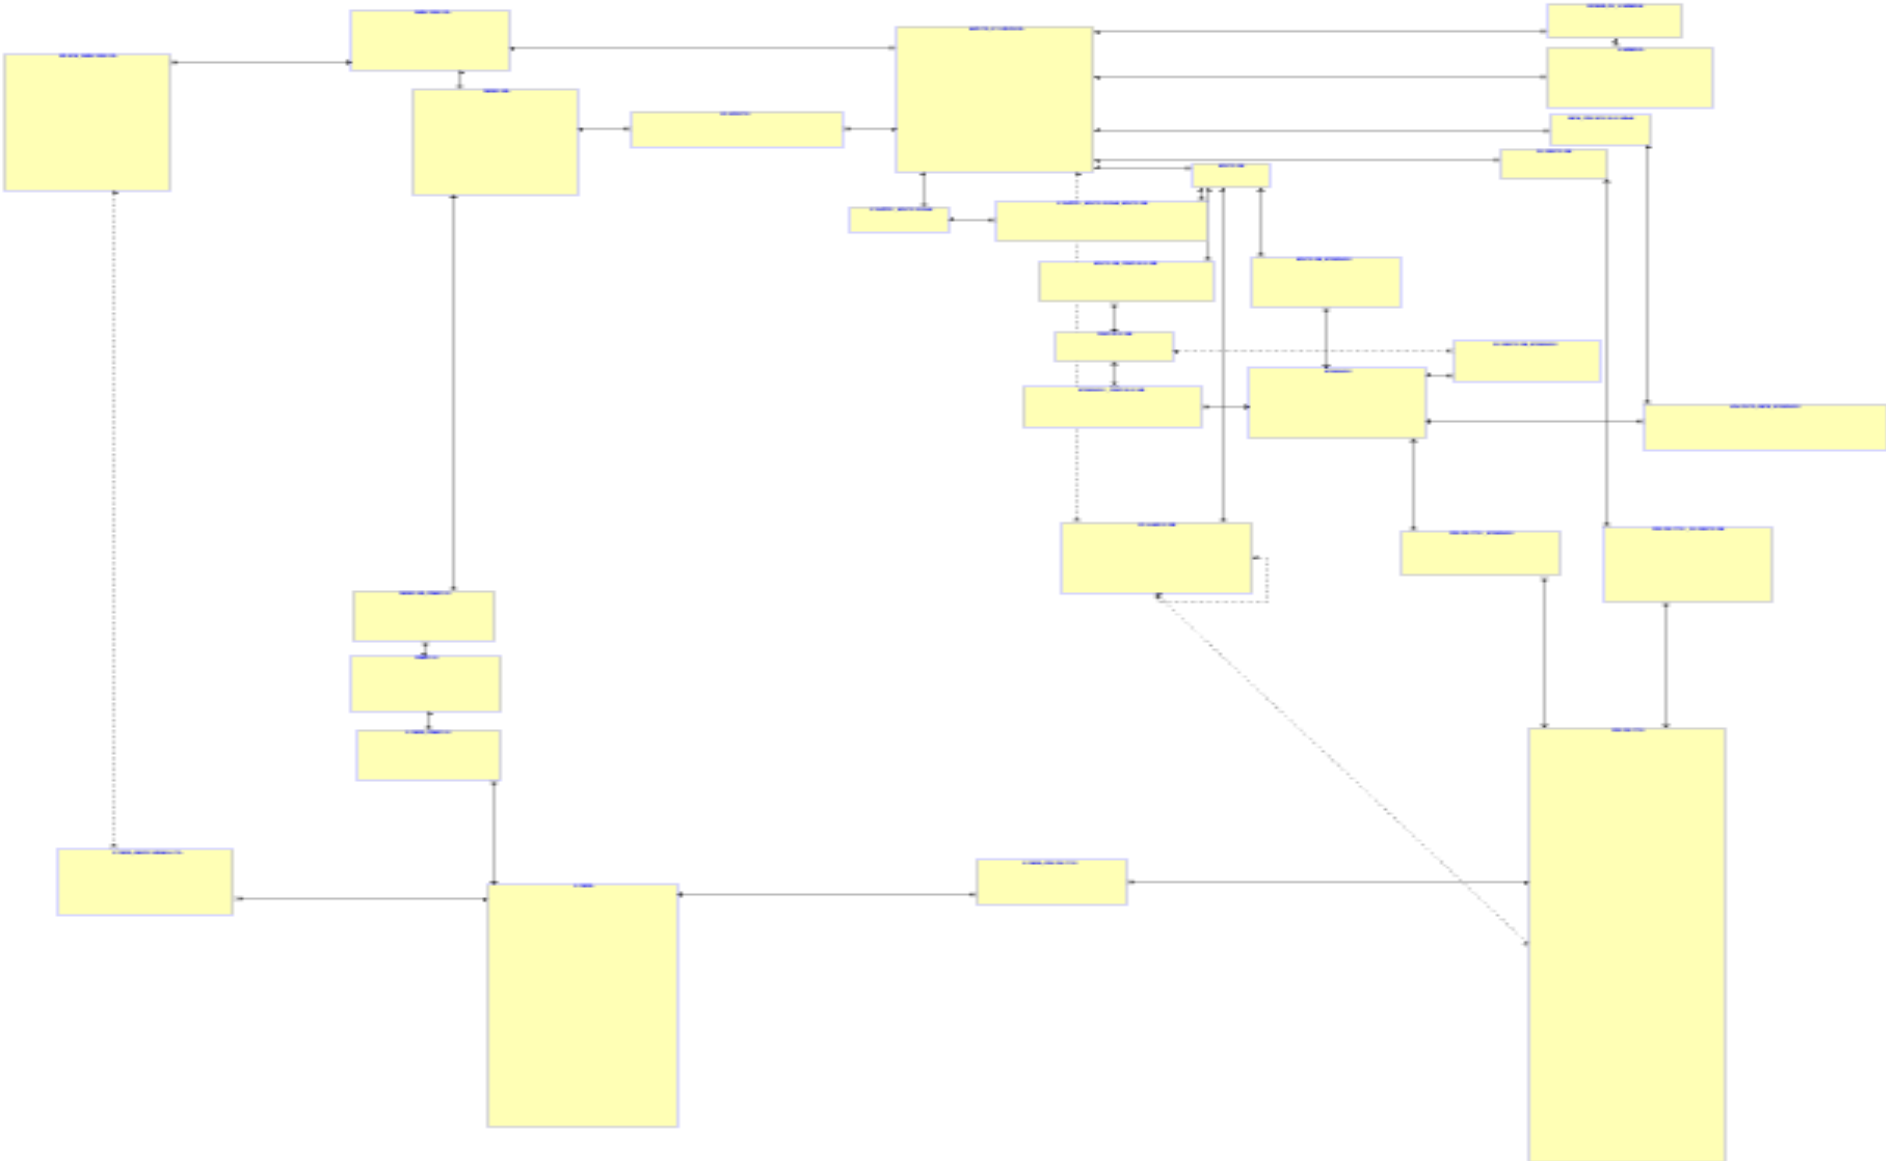

# Core network

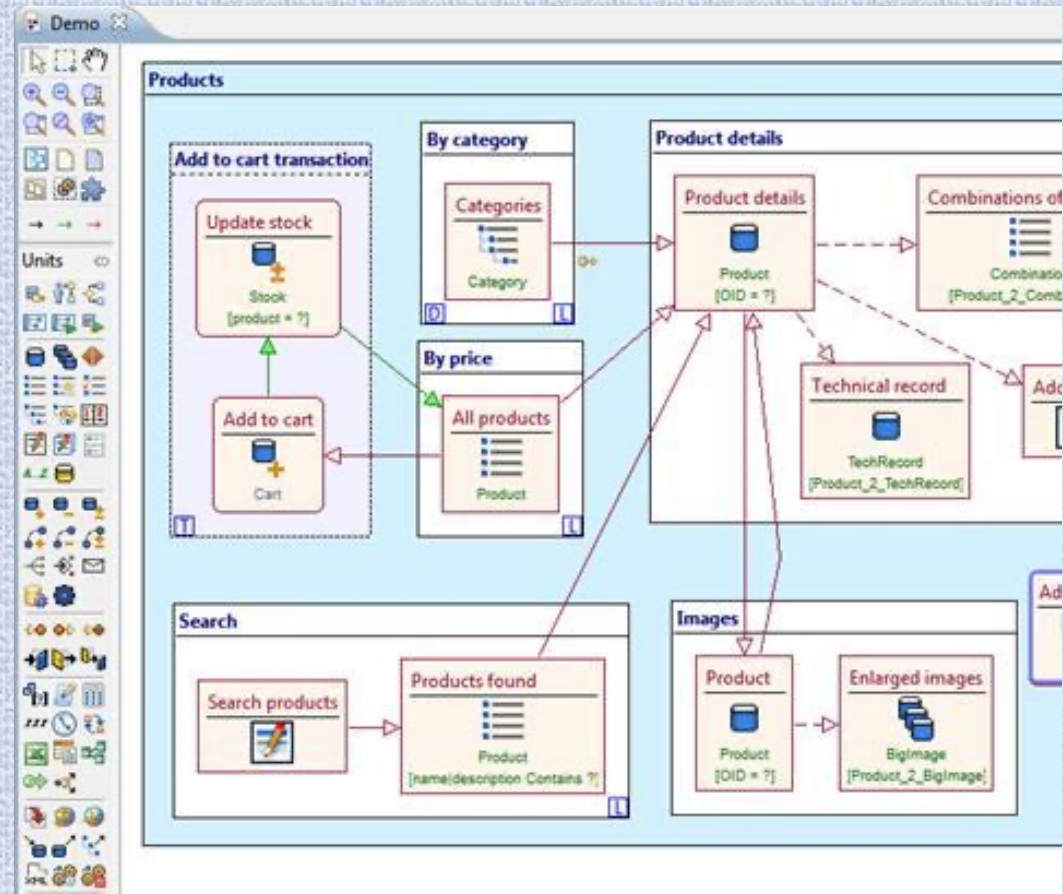

# Core network after deeper analysis

# Web Modeling (Ceri-Fraternali)

- Web pages assembled by predefined query types
- Links between pages and inside pages activated
  - implicitly
  - by user's clicks
- They carry the context – and this is the main aspect of the model
